### Introduction

The London Borough of Redbridge as a highways authority have a statutory duty in regards to its winter maintenance plans. This document has been prepared in compliance with those requirements and with the current Well-Managed Highway Infrastructure guidance. The document outlines the procedures for dealing with winter weather conditions and gives detail on the response the Council will take to treat the network proactively as well as reactively.

This document outlines the procedures and protocols for addressing Winter weather conditions, presenting the decision matrices, the resources and gritting routes that will be instructed. Ad-hoc instructions to treat the network can be requested by the decision officer. Within the Council's treatment plans it grits as part of its Red and Blue routes 227.4km. The Council also treats footways on high streets, medical and health centres and outside school gates in that priority order.

Whilst treating the London Borough of Redbridge, the Council also recognises its responsibilities to work with the Greater London Authority, the emergency services, Transport for London and neighbouring boroughs to keep London moving in difficult times.

This document is available to all to view or download from the London Borough of Redbridge website.

## **Policy Statement**

As the Highway Authority, the Council is obligated by the Highways Act 1980 Section 41(1A) to ensure, so far as is reasonably practicable, that safe passage along highways is not endangered by snow or ice.

The objective of the London Borough of Redbridge's Winter Service Policy is to ensure a reliable and well-coordinated service that facilitates the safe movement of vehicles, cyclists, and pedestrians throughout the borough, minimising delays and disruptions during adverse winter weather conditions.

The Council will commence with pre-treatment of designated areas and, if required, will proceed with treating its network utilising its available resources efficiently and complying with this Winter Service Plan plan.

When the prescribed routes have been treated then any resident will be within 500 metres of a treated road. The routes are created via analysis, thermal mapping and road hierarchies according to their classification, they are also optimised for the use of Winter Maintenance Vehicles. The routes are chosen so that primary traffic routes, bus routes, roads of local significance for traffic movement and known isolated areas where frost problems occur are treated.

Point B.2.3.4 of the Well-Managed Highway Infrastructure 2016 states:

Given the scale of financial and other resources involved in delivering the Winter Service, it is not considered reasonable either to:

- provide the service on all parts of the Network; and
- ensure carriageways, footways and cycle routes are kept free of ice or now at all times, even on the treated parts of the network.

On the 12<sup>th</sup> March 2009 the Secretary of State for Transport ordered a review of Winter Service throughout England and announced that the UK Roads Liaison Group (UKRLG) would carry out that review and make recommendations to Highway Authorities. That review was completed and published in July 2009 and issued to all Highway Authorities in England.

One of the key recommendations was that highway authorities adopt a winter service resilience standard. This is based on dealing with a number of days continuous severe weather conditions salting on a defined strategic minimum winter network.

The guidance given for the purposes of defining the network and standard is to allow at least six days resilience from severe snow conditions during the winter season.

Therefore, a Resilience Network is in place which mainly consists of the Red Routes with some amendments to take in to account key transport links which will be treated in times of severe snow, and when salt stocks need to be conserved.

Footways are not treated as a separate exercise under the normal frost warning procedure and rely upon the overspill of the salt from the spreading machine to cover them.

For prolonged periods of snow, a number of locations are treated and a priority list has evolved based around shopping areas, schools, hospitals, sheltered housing, residential homes, railway stations, pedestrian subways, etc.

There are 64 salt bins strategically located throughout the Borough and these are filled prior to the commencement of the Winter Service period and throughout the season if required.

Isolated incidents are also dealt with on request, especially from the Police, in response to particularly difficult circumstances, subject to availability of resources.

Where there are prolonged spells of heavy snow and ice the Council's Highway Maintenance contractors are instructed to assist the Street Cleansing Section with hand salting and snow clearance from footpaths focussing on the most heavily used areas and areas where vulnerable people reside.

Officers and personnel are always ready to deal with the conditions when and if they arrive being on constant stand-by 24/7 during the winter season ready to react at short notice to the adverse weather.

Due to the impacts of climate change it is envisaged that longer sustained periods of below freezing temperatures will become more frequent and the Council has put in place adequate levels of salt storage and resilience as part of its Winter Service Plan (this document) to cope with the likelihood of additional snow and below freezing weather events.

## **Organisation and Responsibilities**

#### Winter Service Period

The Winter Service period is the period in which operational staff are ready to deploy and treat the highway network as per the Winter Service Plan and essentially when this plan becomes operationally live.

The Winter Service period commences on the 1 November and full standby arrangements are in place until the 30 April, which are detailed within this document. If adverse conditions occur outside of that period contingency arrangements are in place to respond accordingly.

Those contingency arrangements are the activation of the Severe Weather Desk and instruction of contractors and re-deployment of staff to assist with the delivery of the Winter Service Plan. The contingency arrangements can be activated by Council Gold or Silver at the request of the Client Officers.

## **Operational Responsibilities**

The operational responsibility of the Redbridge highway network comes from its statutory responsibility under the Highways Act 1980 s41 so far as reasonably practicable, that safe passage along a highway is not endangered by snow or ice.

The London Borough of Redbridge is responsible for all adopted roads within the borough, the most up to date list can be found <a href="https://example.com/here">here</a>. The treatment routes are the principal A roads and strategic borough roads that carry the most vehicular traffic and are mostly used by emergency services. It is envisaged once a full carriageway treatment run is completed that every resident will be approximately 500m or less away from a treated carriageway.

Transport for London own, maintain and will treat the A12, A406 and the A1400, their contractors will treat those routes and potentially footways should Transport for London instruct them to do so following their own decision matrices.

The M11 is owned, maintained and treated by National Highways under their own decision matrices.

The instruction to treat by Transport for London or National Highways does not mean the other authority or the Council will treat its roads at the same rate or at all, particularly for periods where temperatures may drop below freezing but now snow or frost is forecast.

Details of the Red Routes, Blue Routes and the Resilience Network for carriageway treatments are detailed in **Appendix C**. The priority list of footway treatments are detailed in **Appendix D**.

## Staffing

The management of the service which includes the route selection and updating of the Winter Service Plan is the responsibility of the officers in the Highways and Transportation team.

The Council's Direct Services Teams (DST) working in the Civic Pride Directorate provides the personnel to drive the gritters, load the salt, act as Winter Maintenance Decision Officers (WMDO), and provide personnel to conduct any footway grits.

There will always be four personnel on standby to treat the carriageways and an operative to load the salt onto the vehicles.

The Council can call upon personnel if more resource is required from within the Council's other direct labour resource pools or from contractors it employs the services of, such as its Highways and Street Lighting contractors.

There will always be a WMDO available at all times during the Winter Maintenance period and will be responsible for looking at the weather forecasts that come in throughout the day, taking decisions in relation to Winter service and recording the relevant actions instructed and completed in the appropriate systems.

As and where appropriate for pro-longed severe weather events or during periods of amber and red weather alerts the Council may decide to activate a Severe Weather Desk which will staffed by officers from the Highways and Transportation team.

#### **Client Officers**

Dhiresh Bhatt – Head of Highways and Transportation

Johnson Gbagbo - Group Manager

The Client Officers are responsible for establishing a Severe Weather Desk and ensuring it is operational during the time of severe weather by Highway Officers. The Client Officers also act as a point of escalation for the WMDOs.

#### **Winter Maintenance Decision Officers**

Derek Wong, Michael Hillsden, Dave Tarling.

#### **Winter Maintenance Operatives**

There are ten operatives that have the required training and route familiarisation to undertake the treatment of the highway network using gritters. Four operatives will be on a rota on any given week with the appropriate resilience in case of sickness or reaching the limit on driver hours and further treatment runs need to be undertaken.

#### Weather Forecasting

A weather forecasting contractor is employed to produce a bespoke service for the Winter Maintenance season. The contractor currently providing this service to the Council is MetDesk. The forecaster provides the Council the following:

- 24 hour forecast at 06:00, 11:00, 22:00
- 2-5 day forecast at 11:00
- Any severe weather warnings
- Any updates to the 24 hour forecast if significantly different to the forecasts sent out at the prescribed times above

The forecasts will be domain based and provided through email with an attachment containing various elements to assist the WMDOs and Council Officers with decision making, such as road surface temperatures, air temperature, wind, visibility precipitation type and amount, any risks such as hoar frost, ice and snow accumulation. It will also provide the confidence, and a general synopsis to assist the decision makers.

The forecaster will also make available the service of its "bench" which is a 24/7 phone line that WMDOs and Council Officers can request updates on the weather, clarify anything in the forecast or ask bespoke questions in relation to the forecast.

As part of its forecasting system, the WMDOs will put the decision on the system and the completed treatments the morning after. Should the system go down the WMDOs will revert to emails for formally recording instructions and will retrospectively input decisions into the system at a later date.

#### **Winter Service Procedure**

## Salt Storage and Capacity

The Council has salt storage facilities at Chigwell Road Recycling Centre and Station Road Barkingside. The total capacity across the two stockpiles are approximately 2,400 tonnes. The storage capacity at Chigwell Road is approximately 800 tonnes, and the Station Road site has a capacity of 1,600 tonnes.

Both stockpiles are monitored throughout the Winter Maintenance period and topped up when appropriate with regularly stock levels taken by those on shovel duty loading the gritters, that is fed back on a weekly basis to the Client Officers. The Council has contracts in place with suppliers to regularly top up its salt levels and can call on national emergency reserves if required, although this should only be used if absolutely necessary. The Council can also call upon mutual aid from neighbouring boroughs, Transport for London and National Highways and vice versa.

Minimum levels of salt capacity have been set that all Highway Authorities in England should adhere to. The minimum levels are for the Council to have a reserve stock of at least 12 days worth of stock, which would equate to 48 runs, which would mean the Council must have at least 1,152 tonnes of stock at all times in its stores. Should the Council fall below the minimum stock levels, and no deliveries can be made a decision may need to be taken to fall back to the Resilience Network by the Client Officers in consultation with Senior Council staff and Council leadership.

The salt the Council has is purely for Council use. The salt storage above at the two facilities does not account for the salt provided in the grit bins across the borough.

## Operational Capacity and Delivery

The Council currently have the following plant and equipment at its disposal to treat the highway network:

- Econ 3cu<sup>3</sup> spreader 7.5tn
- Econ 6m<sup>3</sup> CMA spreader 18tn
- Econ 6m³ CMA spreader 18tn
- Econ 6m³ CMA spreader 18tn
- Econ 6m³ spreader 18tn
- Snow plough attachments
- One loading shovel

The Council's Direct Services Teams (DST) working in the Civic Pride Directorate to undertake the treatment from the vehicles and to also undertake the treating and clearing of the footways. The Council can call upon other internal resources to undertake duties as required, usually the instruction will come from Silver or Gold who will have the authority to re-direct Council resource and it can utilise any contractors in its employment such as the Highways and Street Lighting contractors.

## **Decision Making Process & Matrices**

The Winter Maintenance Service consists of the following activities:

Pre-Salting – The spreading of rock salt on roads before the expected formation of frost, snow or ice.

Post-Salting – Treating roads after the snow or ice has formed.

Snow Clearing – From roads and footways stated in the appendices through installing ploughs on gritters and clearing snow by hand on footways.

Salt Bins – Strategically placed bins throughout the borough that can be used to assist footway gritting.

The following matrices are guides that assist the WMDOs in making a decision on whether to treat or not.

#### **Decision Matrix Guide**

		Pred	licted Road Conditi	ons
Road Surface Temperature	Precipitation	Wet	Wet Patches	Dry
May fall below 1°C	No rain No hoar frost No fog	Salt before frost	Salt before frost	No action likely,
	No rain No hoar frost No fog	Call Bollolo Hoot	(see note a)	weather (see note a)
Expected to fall below 1°C	Expected hoar frost Expected fog		Salt before frost (see note b)	
	Expected rain BEFORE freezing	Salt after rain stop	s (see note c)	
	Expected rain DURING freezing	Salt before frost, a rain stops (see not	s required during rail e d)	n and again after
	Possible rain Possible hoar frost Possible fog	Salt before frost		Monitor weather conditions
Expected snow		Salt before snow fa	all	

The decision to undertake precautionary treatments should, if appropriate, be adjusted to take account of residual salt or surface moisture.

All decisions require continuous monitoring and review.

#### **Treatment Matrix Guide**

Weather Conditions Road Surface Conditions		Treatment	
Road Surface Conditions  Road Surface Temperature (RST)	Air Temperature	Salting (g/m²)	Ploughing
Frost or forecast frost RST at or above -2°C		10	No
Frost or forecast frost RST below - 2°C and above - 5°C		20	No
Frost or forecast frost RST at or below - 5°C and above -10°C and dry or damp road conditions		20	No
Frost or forecast frost RST at or below - 5°C and above -10°C and wet road conditions (existing or anticipated)		2 x 20	No
Light snow forecast (<10mm)		20	No
Medium/heavy snow forecast		2 x 20	No
Ice formed (minor accumulations)	above -5°C	20	No
Ice formed	at or below -5°C	2 x 20	No
Snow covering exceeding 30mm		20-40 (successive)	Yes
Hard packed snow/ice	above - 8°C	20-40 (successive)	No
Hard packed snow/ice	at or below - 8°C	salt/abrasive (successive)	No

Rate of spread for precautionary treatments may be adjusted to take account of residual salt or surface moisture.

If snow is forecast and will exceed 50mm the WMDOs may decide to instruct ploughs are fitted to remove snow as well as treat the roads.

## Officer Procedures – Decision Makers

The Council receives a winter weather forecast by its contracted forecaster who gives regular updates on local weather conditions based on specific site locations across London to the Council and in particular the Client Officers and the WMDOs. Regular forecasts are required to ensure that treatments are not missed.

The WMDOs will take a decision using the matrices outlined in the section above to carry out presalting operations or not. The decision is usually formed from the 11:00 forecast as it provides enough time to mobilise resources, vehicles and load the salt before the colder road surface

temperatures set in before sunset and the formation of frost and ice are most likely. The WMDOs will aim to make a decision by 4pm for an evening treatment or as soon as possible if an early afternoon treatment is required.

If the forecast is unclear, and a treatment decision is what is referred to as 'marginal' the WMDOs can either make a positive proactive decision to stand resources up and then stand down if an update received from the forecaster shows treatment is no longer required, or the WMDO can defer their decision and request a further update from the forecaster to make a decision.

The decision recorded by the WMDO is to be recorded electronically and instructed via the forecasters system. That instruction is then sent to the distribution group nominated on the system. Should any revised or additional instructions be required, these can be amended on the system and re-sent. The decision will be taken and recorded every day during the Winter Maintenance Period, even in instances where there is no action.

The next day before midday the decision sheet will be recorded on the forecasters system to note the actions that were complete throughout the night or evening/afternoon, and justification if any actions instructed were not carried out. This forecasting system will then email the information to the nominated distribution group.

For urgent requests to treat, the mobilisation period is 90 minutes from the instruction given by the Client Officers. In case of forecasted bad weather, the gritting vehicles will be wherever possible pre-loaded and kept under cover at Ley Street Depot to allow for rapid response.

#### Severe Weather Desk

Upon receiving a forecast that predicts prolonged or significant snow across the borough, the Client Officers from the Highways and Transportation team will establish a Severe Weather Desk (SWD). The desk will be based at either Lynton House, Ley Street Depot or held virtually if required. The desk from when it becomes operational will be available 24/7 until it is closed and staff will be rota'd to ensure availability during its operation.

The Severe Weather Desk is enabled to assist the WMDOs and allow them to focus on the tactical response, whilst the strategic picture is taken over by the SWD. The SWD will record additional instructions or requests to treat or re-treat parts of the network from the emergency services, Transport for London, and other relevant authorities. The SWD will then feed that into the WMDOs tactical plan and act accordingly. The SWD will arrange daily calls for updates to all internal stakeholders and provide strategic direction for the WMDOs.

All requests from the Customer Contact Centre, complaints or anything related to Winter should be sent to the SWD for it to respond to and action if appropriate.

The SWD will also link in and provide up to date records of actions and logs to the Civil Protection team that undertake the Emergency Planning function of all additional requests to treat the network and all decisions made by the WMDO as part of the tactical treatment plan. It will also be available to join any Tactical or Strategic Coordination Group calls (TCG/SCG) to provide updates and also take any instructions from the Councils Silver or Gold groups that may be activated.

The Client Officers will decide to close the SWD in consultation with the Civil Protection team.

#### **Resilience Routes**

The Secretary of State of Transport ordered a review of Winter Service throughout England in 2009, the UK Roads Liaison Group would undertake that review and provide recommendations to Highway Authorities. The review was published in July 2009 and a key recommendation was for Highway Authorities to adopt a winter resilience standard. This resilience standard is to be used when dealing with a prolonged period of severe winter weather treating the most fundamental routes in the borough.

The Council has its red and blue gritting routes (primary routes and secondary routes) that is envisages to treat according to its decision matrices, those routes can be seen in **Appendix C**. Also contained within **Appendix C** are the "resilience routes" (the Resilience Network) which are the fundamental routes the Council can fall back on should there be a prolonged severe winter weather period, which forms the defined strategic minimum winter network as prescribed by the Winter Service review recommendations.

The falling back to the Resilience Network will be a decision taken by Client Officers in consultation with Senior Council staff in consultation with Council leadership.

### **Operational Delivery**

The Council operates on a 24/7 basis during the Winter season. To complete red and blue routes the Council uses four gritters that will complete the routes in a total of five hours, which includes time for mobilisation. There is always one gritter that is kept as spare in case of a breakdown and the plant company on call in case of any further breakdowns to ensure the Winter service is not disrupted.

The Council uses rock salt as its primary treatment material. It focuses precautionary treatments on the carriageway, residual salt will go on to the footways from the carriageway treatment. It should be noted that it may not always be feasible to carry out precautionary footway treatment due to timing of forecasts and mobilisation of resource to undertake footway treatments. Lightly segregated cycle routes will be treated alongside the carriageway treatment via the spreader of the vehicle.

There are salt bins deployed across the borough and will be used to treat nearby areas.

The below table provides the kilometrage of each route in the red routes, blue routes and the Resilience Network shown in **Appendix C** as well as the corresponding tonnage of salt that would be used to treat that route at the treatment rates prescribed from the decision matrix.

Routes	Route 1	Route 2	Route 3	Route 4	Total	10g/m² Rate	20g/m² rate
Red Routes	22.1km	38.1km	30.7km	19.6km	110.5km	5.88tn	11.76tn
Blue Routes	28.2km	37.8km	26.7km	22.8km	115.5km	6.12tn	12.24tn
Resilience Network	34.	lkm	49.	1km	83.2km	4.4tn	8.8tn

Therefore, for what would be considered a single full carriageway run with at 20g/m<sup>2</sup> would result in 24 tonnes of salt being used. As described in the matrix, if there is residual salt the rate can be set between 10-20g/m<sup>2</sup>.

#### Liaison and Communication

The WDMOs will communicate via the decision log to the Client Officers about the instruction to treat. The instructions will be picked up by the Council's Press Office team and look to schedule in posts on Social Media to show what the Council is doing.

Frequent liaison between internal Council teams will take place during periods of severe Winter weather on TCG or SCG calls or via the SWD through its daily calls or other methods of communication.

The SWD, Client Officers or the Civil Protection team will be in contact with neighbouring authorities, Transport for London and the emergency services during periods of severe Winter weather to ensure a coordinated and collaborative approach.

The importance of communication between relevant teams in relation to the tactical deployment of resources and actions and the strategic picture of the borough is critical in ensuring the success of the Winter Service Plan.

#### **Council Considerations**

The decision to grit/salt in the light of expected freezing conditions or snow rests upon the Winter Maintenance Duty Officer (WMDO).

To be effective, salt must be spread evenly and at rates to suit prevailing weather conditions.

#### Use of salt /sand and ballast

Where salt is to be used, it must be applied in its neat form. Sand or ballast will be sent out later if considered to be necessary.

Care must be taken that salt is not spread needlessly, or wastefully, any lumps must be broken up. In the event of mechanical salt spreading machines not being available, the spreading of salt, sand or ballast on the highway will be carried out by staff by means of hand shovels.

This should only be on the instruction of the WMDO or the Client Officer.

Employees sent out to spread salt, sand or ballast must be reminded that care must be taken to ensure that it is not thrown onto pedestrians or vehicles.

Care must be taken to ensure that salt is not thrown upon lawns and flower beds and where practicable no salt is to be applied within 1.8m of a young tree.

Where lightly segregated cycle tracks are present drivers are encouraged to ensure the salt covers the cycle track too.

#### Loading and transportation of salt

Loading of salt will be done with the use of a loading shovel at the storage locations previously mentioned.

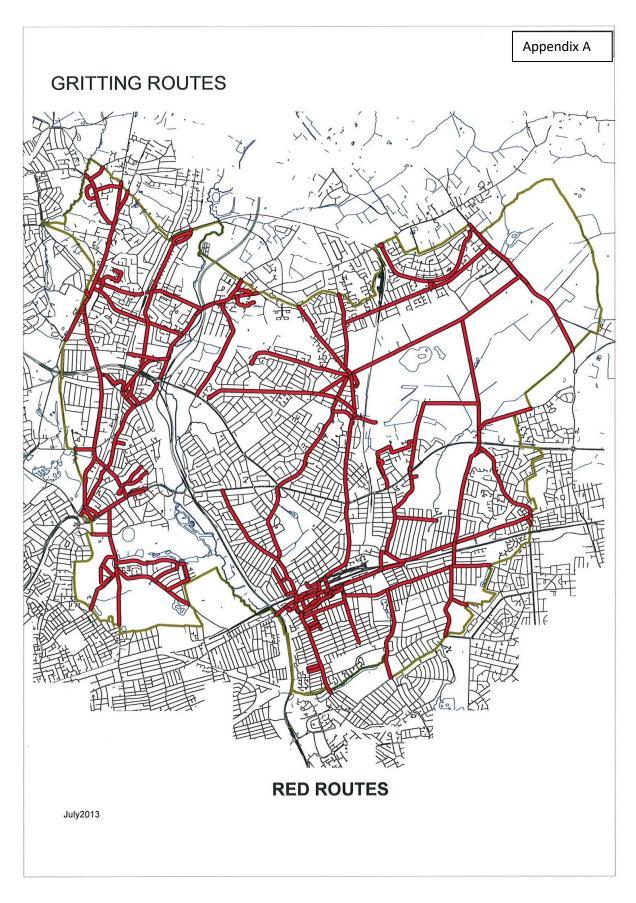

Salt can be transferred to the appropriate storage sites and grit bins appropriately and in time for severe weather so as to not disrupt gritting operations.

## **Council departments snow clearance procedures**

Due to the need to prioritise Highways, all other Departments will be expected to make their own arrangements prior to the winter season, and resources should not be diverted from the legal duty to treat Highways unless on the instruction of the Operational Director of Highways and Transportation or delegated to the Client Officer. All other Directors have been informed of this and should have their own arrangements in place.

Vork Dood	LYOF MEME TO A FOME POSE
York Road	Tork Wews to Argyle Road
York Road  FOOTPATHS & ALLEYWAYS  Footpath Fulwell Parade to Basildon Avenue	Total wiews to higgie rodu

#### CLEARING SNOW AND ICE FROM PAVEMNTS AND PUBLIC PLACES

This guide is designed to help you to act in a neighbourly way by safely clearing snow and ice from pavements and public spaces.

#### Will I be held liable if someone falls on a path I have cleared?

There is no law preventing you from clearing snow and ice on the pavement outside your property, pathways to your property or public spaces.

It is very unlikely that you would face any legal liability, as long as you are careful, and use common sense to ensure that you do not make the pavement or pathway clearly more dangerous than before. People using areas affected by snow and ice also have responsibility to be careful themselves.

#### What can I do to help clear snow and ice from pavements and public spaces?

Practical advice from highway engineers is given below.

This is not a comprehensive list.

**Start early:** it is much easier to remove fresh, loose snow compared to compacted ice that has been compressed by people walking on it.

**Do not use hot water.** This will melt the snow, but may replace it with black ice, increasing the risk of injury

**Be a good neighbour:** some people may be unable to clear snow and ice on paths leading to their property or indeed the footway fronting their property. Snowfall and cold weather pose particular difficulties for them gaining access to and from their property or walking to the shops.

If shovelling snow, consider where you are going to put it, so that it does not block people's paths, or block drainage channels. This could shift the problem elsewhere.

Make a pathway down the middle of the area to be cleared first, so you have a clear surface to walk on. Then you can shovel the snow from the centre to the sides.

Spreading some salt on the area you have cleared will help to prevent any ice forming.

Table salt or dishwasher salt will work, but avoid spreading on plants or grass as they may be damaged by it. A few grams (a tablespoon) for each square metre you clear should work. The salt found in salting bins will be needed for keeping roads clear.

Particular care and attention should be given to steps and steep gradients to ensure snow and ice is removed. You might need to apply additional salt to these areas.

Use the sun to your advantage. Removing the top layer of snow will allow the sun to melt any ice beneath; however you will need to cover any ice with salt to stop it refreezing overnight.

If there is no salt available, then a little sand or ash is a reasonable substitute.

It will not have the same de-icing properties as salt but should offer grip under foot.

#### Where can I find out more information about what I can do in an emergency?

The Preparing for Emergencies web pages on Direct.Gov contain useful information on how you can prepare for the impacts of all emergencies.

https://www.gov.uk/government/publications/preparing-for-emergencies/preparing-for-emergencies

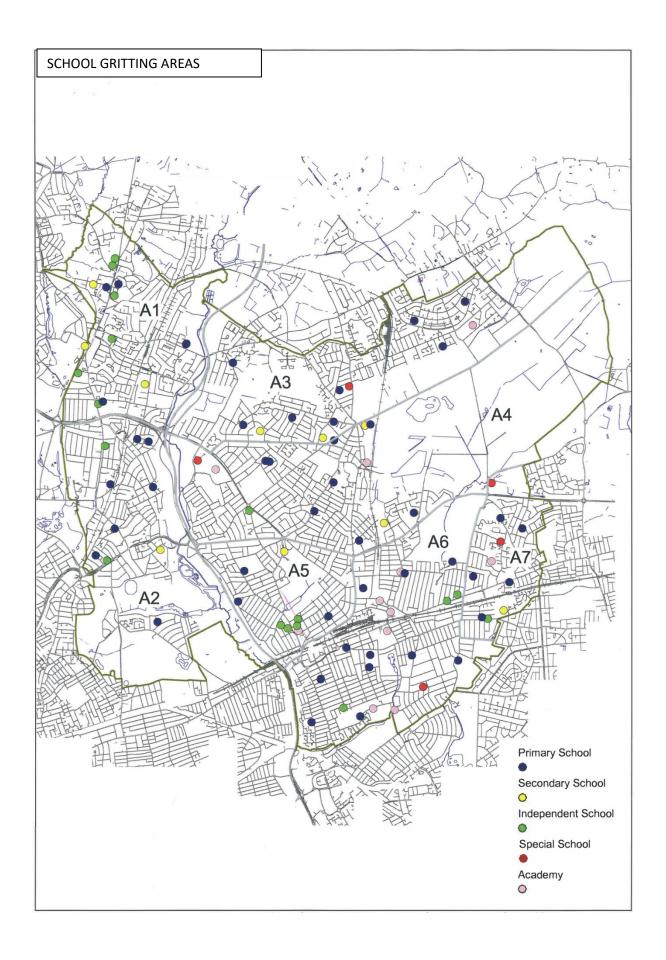

#### Why is the Government publishing this information?

During the severe winter in 2009/10, many people across the country worked very hard to keep our transport network open. This included many members of the public who cleared pavements and public spaces around their homes.

Some people, however, were deterred from taking action to clear pavements and other public spaces because they feared that they might be sued.

An independent review of the transport sector's response to the severe weather of 2009/10 recommended that the Department for Transport should publish this note on good practice for members of the public in clearing snow and ice from footways and other public spaces.

The Local Government Association published a report on behalf of Councils which reached the same conclusion. The Government is committed, as a key part of the Big Society agenda, to remove the barriers which may unnecessarily prevent people from helping themselves and those around them.
